

Smart Oncology Office is a complete business system for assigning chemotherapy regimens, managing patient treatments, tracking outcomes and billing insurers. Smart Oncology Office equips physicians and practice administrators to provide the best care for patients in the most insurance-friendly way. Smart Oncology Office helps you control patient out-of-pocket costs and eliminate errors and waste that can erode your margins.

Smart Oncology Office will elevate the efficiency of your patient care by:

- managing chemotherapy treatment plans, diagnosis, and staging information.
- capturing chemotherapy administration data.
- automatically calculating dosage information, BSA and Relative Dose Intensity.
- producing data flowsheets that reflect which drugs were administered to the patient, and what performance indicators were present.
- utilizing Compendia-based drug approval, to ensure medication is covered for the patient's diagnosis.
- creating the prescription order for the pharmacy. This option can be linked through an interface to Pyxis machines.
- providing an interface to sync patient demographics and appointment information with your Practice Management Solution.

Smart Oncology Office will also ensure accuracy with insurance and billing information by:

- allowing for review of billing information.
- providing the option to send billing information to the office's billing system.
- automatically determining which codes need to be billed based on the length of procedure, and medications.

Additional Options offered by Smart ID Works for customers with Smart Oncology Office:

- replacement drug finder. Smart ID Works can be tasked through the system to find free replacement medications for patients that are receiving drugs that are being used off label, or for patients that don't have the financial resources to pay for the drugs.
- Smart ID Works can provide additional revenue sources to a practice with our current data sales agreements. By the practice contributing to the aggregate data, it becomes more valuable than just trying to sell it on their own.
